Application

Inhibits the production and deposition of melanin, removes spots and freckles

Helps in skin whitening, promotes even skin tone

Treats scars caused by ultraviolet burns, has anti-inflammatory and repair effects

Safer and more effective than traditional whitening ingredients such as hydroquinone

The English name of alpha-Arbutin is "alpha-Arbutin" or "4-hydroquinone-alpha-D-glucopyranoside". It is a hydroquinone glycoside compound extracted from plants such as bearberry. It can be used as a whitening agent in cosmetics.
