### Application

NADPH, Tetrasodium Salt, with the CAS number 2646-71-1, is a form of Nicotinamide adenine dinucleotide phosphate (NADPH) that has been processed with tetrasodium to enhance its stability and solubility. NADPH is an important coenzyme involved in various biochemical reactions, particularly in cellular energy metabolism and redox reactions.

1. Enzyme Cofactor: NADPH is an essential cofactor for several enzymes, including cytochrome P450 enzymes, which play a key role in drug metabolism and detoxification processes. NADPH provides the necessary reducing power for these enzymatic reactions.
2. Biosynthesis: NADPH is involved in biosynthetic pathways, such as fatty acid and cholesterol synthesis. It provides the reducing power needed for these anabolic processes.
3. Antioxidant Defense: NADPH is crucial for antioxidant defense mechanisms, such as the regeneration of glutathione. It helps protect cells from oxidative stress and damage.
4. Biotechnology and Research: NADPH, Tetrasodium Salt finds application in various biotechnological processes, enzymatic assays, and research studies that require NADPH as a cofactor.
